Description
This conference will help educate and address the changing landscape of the management of cancer patients from screening to treatment and survivorship for primary care physicians and oncology specialists.

Objectives
- Review and discuss the guidelines for cancer screening in a number of areas including prostate/urology, breast, lung, colorectal, GI and melanoma.
- Develop and implement systems in practice to educate patients on the importance of screening.
- Formulate treatment options for those who need therapy.
- Update primary physicians on screening and management of cancer patients.
