Rare Tumors/Cancer

Having a personal history or a 1st degree relative by itself warrants a referral:

- Adrenocortical tumor
- Adenoma malignum of cervix
- Desmoid tumor
- Endolymphatic sac tumor
- Gastrinoma
- Hemangioblastoma
- Medullary thyroid carcinoma
- Ovarian sex cord tumor with annular tubules
- Ovarian small cell carcinoma, hypercalcemic type
- Parathyroid adenoma diagnosed <30 years or parathyroid adenoma with multiple glands involved
- Pheochromocytoma or paraganglioma
- Primary pigmented nodular adrenocortical dysplasia
- Retinoblastoma
- Rhabdoid tumors
- Sarcoma (non-Ewing) diagnosed <18
- Sertoli cell tumor

Pancreatic Cancer

For your patients with cancer

- Pancreatic cancer diagnosis with any of the following:
  - >2 cases of pancreatic cancer in close relatives*
  - >2 cases of breast, ovarian, and/or aggressive prostate cancer
  - Ashkenazi Jewish ancestry
  - Pancreatic cancer and >2 additional cases of Lynch syndrome related cancers in the same person or close relatives*
  - Pancreatic cancer and melanoma in the same person

For your patients NOT affected with cancer

- Close blood relative* who meets any of the above criteria
- Blood relative with known mutation in a cancer predisposition gene

For current guidelines, visit www.NCCN.org.

* Close relative = 1st or 2nd degree relative (brothers, sisters, parents, children; aunts, uncles, grandparents, half-brothers, half-sisters, nieces, nephews)
### Breast Cancer

**For your patients with cancer**
- A female with breast cancer ≤50
- Triple negative breast cancer at ≤60
- ≥2 primary breast cancers in the same person
- Breast cancer at any age with any of the following:
  - ≥2 close (1st or 2nd degree) blood relatives with breast cancer at any age
  - ≥1 close relatives* with ovarian cancer
  - ≥2 close relatives* with pancreatic or prostate cancer (Gleason score ≥7)
  - A close male relative with breast cancer
  - Ashkenazi Jewish ancestry
  - Relative with a mutation in a breast cancer predisposition gene
- A male with breast cancer at any age
- Lobular breast cancer and diffuse gastric cancer in the same person, or lobular breast cancer with diffuse gastric cancer in a relative, one diagnosis ≤50

**For your patients NOT affected with cancer**
- 1st or 2nd degree blood relative who meets any of the above criteria
- 3rd degree relative with breast and/or ovarian cancer with ≥2 close blood relatives* with breast cancer and/or ovarian cancer
- Blood relative with a known mutation in a cancer predisposition gene

### Gynecologic Cancer

**For your patients with cancer**
- Ovarian, fallopian, non-epithelial ovarian, or primary peritoneal cancer at any age
- Endometrial cancer ≤50
- Endometrial cancer showing mismatch repair deficiency on tumor screening
- Endometrial cancer at any age with 1st degree relative with colorectal or endometrial cancer
- Endometrial cancer and 2 additional cases of colorectal, endometrial, ovarian, gastric, small bowel, or other Lynch syndrome cancer in blood relatives
- Synchronous or metachronous endometrial and/or colorectal cancer in the same person
- Blood relative with a known mutation in a cancer predisposition gene

**For your patients NOT affected with cancer**
- Close blood relative* who meets any of the above criteria
- Breast and ovarian cancer on same side of family
- Ashkenazi Jewish ancestry
- Blood relative with a known mutation in a cancer predisposition gene

### Gastrointestinal Tumors/Cancer

**For your patients with cancer**
- Colorectal cancer ≤50
- Colorectal cancer with ≥10 adenomatous polyps in the same person
- Colorectal cancer showing mismatch repair deficiency on tumor screening
- Synchronous or metachronous colorectal and/or endometrial cancer
- Colorectal cancer and two additional cases of Lynch syndrome associated cancers (e.g., endometrial, ovarian, gastric, small bowel, pancreatic cancers, and others)
- >10 adenomatous polyps OR multiple juvenile polyps OR multiple serrated polyps OR multiple hamartomatous polyps in the same person
- Gastric cancer in a person with at least one close blood relative* with gastric cancer, one diagnosed at ≤50 years of age
- Diffuse gastric cancer and lobular breast cancer in the same person
- Gastric cancer with lobular breast cancer in a close relative* at least one case ≤50
- Gastric cancer and ≥2 additional cases of Lynch syndrome associated cancers in the same person or in close relatives*.

**For your patients NOT affected with cancer**
- Close blood relative* who meets any of the above criteria
- Blood relative with a known mutation in a cancer predisposition gene

### breast cancer

**For your patients with cancer**
- A female with breast cancer ≤50
- Triple negative breast cancer at ≤60
- ≥2 primary breast cancers in the same person
- Breast cancer at any age with any of the following:
  - ≥2 close (1st or 2nd degree) blood relatives with breast cancer at any age
  - ≥1 close relatives* with ovarian cancer
  - ≥2 close relatives* with pancreatic or prostate cancer (Gleason score ≥7)
  - A close male relative with breast cancer
  - Ashkenazi Jewish ancestry
  - Relative with a mutation in a breast cancer predisposition gene
- A male with breast cancer at any age
- Lobular breast cancer and diffuse gastric cancer in the same person, or lobular breast cancer with diffuse gastric cancer in a relative, one diagnosis ≤50

**For your patients NOT affected with cancer**
- 1st or 2nd degree blood relative who meets any of the above criteria
- 3rd degree relative with breast and/or ovarian cancer with ≥2 close blood relatives* with breast cancer and/or ovarian cancer
- Blood relative with a known mutation in a cancer predisposition gene

### Gynecologic Cancer

**For your patients with cancer**
- Ovarian, fallopian, non-epithelial ovarian, or primary peritoneal cancer at any age
- Endometrial cancer ≤50
- Endometrial cancer showing mismatch repair deficiency on tumor screening
- Endometrial cancer at any age with 1st degree relative with colorectal or endometrial cancer
- Endometrial cancer and 2 additional cases of colorectal, endometrial, ovarian, gastric, small bowel, or other Lynch syndrome cancer in blood relatives
- Synchronous or metachronous endometrial and/or colorectal cancer in the same person
- Blood relative with a known mutation in a cancer predisposition gene

**For your patients NOT affected with cancer**
- Close blood relative* who meets any of the above criteria
- Breast and ovarian cancer on same side of family
- Ashkenazi Jewish ancestry
- Blood relative with a known mutation in a cancer predisposition gene

### Gastrointestinal Tumors/Cancer

**For your patients with cancer**
- Colorectal cancer ≤50
- Colorectal cancer with ≥10 adenomatous polyps in the same person
- Colorectal cancer showing mismatch repair deficiency on tumor screening
- Synchronous or metachronous colorectal and/or endometrial cancer
- Colorectal cancer and two additional cases of Lynch syndrome associated cancers (e.g., endometrial, ovarian, gastric, small bowel, pancreatic cancers, and others)
- >10 adenomatous polyps OR multiple juvenile polyps OR multiple serrated polyps OR multiple hamartomatous polyps in the same person
- Gastric cancer in a person with at least one close blood relative* with gastric cancer, one diagnosed at ≤50 years of age
- Diffuse gastric cancer and lobular breast cancer in the same person
- Gastric cancer with lobular breast cancer in a close relative* at least one case ≤50
- Gastric cancer and ≥2 additional cases of Lynch syndrome associated cancers in the same person or in close relatives*.

**For your patients NOT affected with cancer**
- Close blood relative* who meets any of the above criteria
- Blood relative with a known mutation in a cancer predisposition gene
